

As a brand new subscriber to xmradio I was able to use this on a trip to national forests where conventional radio reception is erratic and limited. I was able to receive wonderful music and listen to news, traffic and weather reports along my trip and be able to plan my trip more comfortably. I do not see why this great new technology should be limited by big business just because they are threatened with healthy competition. Please reject NAB's petition 04-160, which I will also notify my congressman of wishes.
